

## Chart of the Day Are you riding the lightning on CoreWeave (\$CRWV)

May 27, 2025

Dan Fitzpatrick reviewed the explosive price action in CoreWeave, describing it as a textbook example of an IPO breakout strategy. He identified the stock's prior "enthusiasm high" at \$64.62 as a key trigger level for the next buy setup—highlighting that once the stock broke above that level with volume, it signaled the start of a powerful uptrend. Dan noted the importance of managing this type of momentum play using progressive stops to lock in gains while remaining positioned for further upside. He cautioned against exiting too early, given the potential for the stock to reach much higher targets in a short squeeze scenario. Dan also promoted his upcoming Mentor Trading Mastery course, emphasizing its focus on actionable trading frameworks, mindset discipline, and live trading to help participants turn knowledge into results.

### Next Steps:

1. Traders to monitor CoreWeave's price action relative to the \$64.62 breakout level for signs of continued strength.
2. Members holding CoreWeave to use progressive stops under key intraday lows to manage risk while participating in upside potential.
3. Investors to avoid panic selling strong momentum trades too early—take partial profits but ride the trend.
4. Interested traders to register for the Mentor Trading Mastery course before pricing increases, especially if seeking a structured approach to consistent profitability.
5. Non-members to consider signing up for a trial to gain access to strategy sessions and trade alerts.
6. All traders to continue focusing on risk management, smart entry points, and emotional discipline when trading volatile names.

### Transcript:

0:01: Hey, I'm Dan Fitzpatrick, Stock market mentor.com, and it's Tuesday, May 27th.

0:07: Now I wanna look at this stock like this thing has been just trading pornography really, this is what we did, you hopefully you're a member and you know this already, but if you're not a stock market mentor member, you, you would have known this, that this back here was the enthusiasm high, OK, so, this was, This was really where you wanted to be, looking at this as an opportunity to be buying.

0:38: Forget about this stuff down here that's a totally different trade, but the idea is that when a stock comes public and then at some point it will print an obvious high, an obvious high where.

0:51: The last of the retail buying came in and that was this, again, it's totally, it was totally obvious, not here, this thing could have gone up forever, but when it falls to here.

1:04: And then it doesn't come back up the very next day.

1:07: Now you got to look back and say, OK, the high was 6462.

1:12: I don't know why I have 6464 there, but I probably just got lazy.

1:16: But that high is 64, 62.

1:20: So what I wanna do is you can trade around this if you want to, but my IPO strategy is OK.

1:26: OK, the next buy signal is when it surpasses this, high that it hit when everybody was all hyped up on core weave, and then once it goes back above there, that's when you want to buy the stock.

1:39: So yeah, there's all kinds of volatile trades here, but the trade the next trade was really not here.

1:47: There this was when the stock, look at the volume here, so the stock pops up here to 68.

1:53: You got to look at this and say wait, high volume move, golly gee, only 25 million shares traded.

2:01: I guess there's some institutions trading that they kind of got all they could get down here now they're just buying the stock and they don't care who knows it and then.

2:10: The stock starts moving and it just keeps going, so this was actually the trade like right about here and so we've got a lot of members who have made some serious bank.

2:22: I mean the stock's up more than 85% from the last entry and my suggestion to them is you ride this thing until it bucks you off.

2:32: Try to be selling.

2:33: A little bit of the position and the strength, but hold it like don't just say oh that was a good trade because I think the stock could go up to 150 in the short squeeze that it's in, but you just use progressive stops like put a stop on some or all whatever of your position below today's intraday, low, and that would be about 12.5.

2:56: which is a huge massive gap between where the stock is now and where you would sell but given the volatility of the stock, it's kind of like the nearest you can put it.

3:08: So anyway, that's all I've got for this and by the way, one other thing here you can go here, you'll see the you'll see the domain name mentor trading mastery I'm teaching this on.

3:22: I'm teaching this on Saturday and Sunday and then also.

3:26: , Saturday and Sunday and then also, on Monday in a free, free course.

3:33: And so I'll show you this thing again, but we're gonna do live trading on Monday and probably do some 59 minute trades.

3:41: I like to always try to make, good money in the live training session if for no other reason than it gets you back, your tuition.

3:48: But then I'm also doing an extra one.

3:51: It's probably already filled by the time you, by the time you're seeing this, but I'm doing an extra session on Thursday.

3:59: It's going to be smaller because I want it to be a dedicated smaller group of traders who are really interested.

4:05: They really want to go deep into this stuff.

4:08: And because of that, I, I can't work with everybody.

4:11: So that'll be Thursday.

4:12: Anyway, so this is something that If you're if you wanna make an investment as opposed to just buy some stuff like oh I wanna buy this workshop, don't come for that but if you wanna make an investment in your trading results hack your time so you're making more for less effort and time I really do truly think that this is a course that.

4:36: You should definitely do.

4:38: We haven't changed this yet, but I've mentioned in emails and so I'll tell you this right now.

4:43: This is 1795.

4:45: That stuff's gonna end tomorrow night at midnight.

4:48: I'm just keeping it open a little bit longer, to accommodate for people that are gone on Memorial Day and they're just getting back.

4:55: So tomorrow at midnight Eastern, price goes from \$1800 not to 2000 bucks.

5:03: I've put in so much more than I had initially planned on.

5:06: The price is gonna go essentially from \$1800 up to \$2200 and I really mean that this isn't a, a sales pitch.

5:16: I'm raising the price to \$2200.

5:19: So, you can either get in now.

5:21: , at the lower price or simply wait and manage your risk and say, well, I want to hear from other people, see whether they like the course or not and if they do then I don't mind paying 400 bucks extra.

5:34: Oh, I know, I'll just email and ask for a deal.

5:38: Don't insult my intelligence, don't.

5:41: It's \$2200.

5:43: So, and for a lot of, a lot of people paying an extra \$400 in exchange for certainty like I wanna know if people got a lot out of it that's actually a good trade so I'm not sitting here pounding the table saying you got to buy, you gotta buy.

5:59: I'm just laying it out for you and then you can figure that out for yourself.

6:04: So anyway, that's all I got for you and.

6:09: Hope you guys are doing well.

6:10: We got a raging bull market, lots of stuff going on, but I know that you're gonna do well in the future.

6:17: Just keep on managing that risk if you're not a member.

6:22: You get a free trial.

6:23: I think it's \$7 but to me that's free.

6:26: It's basically a, a small Starbucks at this point, OK, so definitely check it out.

6:32: It's worth your while if you like it awesome.

6:35: If you don't, it's OK, nothing personal, right?

6:39: That's all I got.

6:40: I will see you all next time.
